Chief, Plans and Programs Staff, OL

Chief, Supply Division, OL

Communications Requirements for 1976 Long-Range
Secure-Voice Requirements

REF : Mult adse memo fr D/L dtd 6 Feb 74, same subject

1. In response to paragraph 4 of reference, secure-voice services presently available to the Supply Division (SD) and the [] are as follows:

a. Office of the Chief, SD: Green line extension off KY-3 located in the Director of Logistics office.

25X1

2. The following additional secure-voice service is presently required and should also be programmed for replacement as new systems are developed:

a. Ames Building (OL/SD)

- | | | |
|-----|------------|--------------|
| (1) | OL/SD/SMB | 2 extensions |
| (2) | OL/SD/CCDB | 1 extension |
| (3) | OL/SD/IDSB | 1 extension |
| (4) | OL/SD/OSB | 1 extension |

It is recommended that a KY-3 be installed in SD to meet the Division's total need. As a temporary measure and due to an increase in number of calls being received on the extension located in C/SD's office, we have an immediate need for a second instrument (off C/SD's extension) in the outside office area. This will allow use of the green phone by other personnel without interrupting C/SD.

Secure-Voice Requirements

25X1A

3. We do not presently have nor do we anticipate a requirement for overseas secure-telephone service. The secure service required for local calls should allow for discussions at a security level of secret. Provision for conference calls between Ames, Headquarters, [redacted] Pentagon, and NSA is desirable, but not a definite requirement.

4. In addition to the secure-voice system, there is a need for facsimile data transmission between the Ames Building, Headquarters, and [redacted] Xerox telecopiers are presently being installed in these locations in order to eliminate time-consuming call-ins. A secure means of transmission would lend itself to a wider application, however, it is doubtful that the cost of a "stand-alone" system could be justified.

5. It is our understanding that the Office of Joint Computer Support is making, or has made, the necessary arrangements for the data link terminals for the DAC.

6. Other communications services available are as follows:

<u>Service</u>	<u>SD</u>	<u>[redacted]</u>
a. Black lines	29	87*
b. Instruments (Black line)	69	138*
c. Call director (key box)	1	0
d. Unlisted numbers	2	2
[redacted]	1	0
[redacted]	2	0
g. GSA line (962)	1	0

*Includes services utilized by [redacted]

This service appears to be adequate for our requirements. Provisions were made during the recent renovations on the 11th floor, Ames Building, for those positions being transferred from [redacted] With the transfer of the Stock Control Branch, [redacted]

SUBJECT: Communications Requirements for 1976 Long-Range
Secure-Voice Requirements

on 4 March 1974, a realignment in phones in the Depot will be necessary and will result in a reduction of approximately 16 instruments plus an undetermined number of lines.

25X1A

7. Please contact [redacted] extension [redacted]
if additional information is desired.
